

Report on China's Cotton Production Prosperity 2015

中国棉花景气报告

2015

毛树春 李亚兵 主编

The graph illustrates the fluctuations in the cotton production prosperity index across different regions of China and the national average from January to May 2015. The national index starts at approximately 80 in January, rises to 95 in February, peaks at 110 in March, and then fluctuates between 95 and 105 through May. Regional indices show similar trends, with Xinjiang and Shandong generally having the highest indices, peaking in March at around 110. Hubei and Jiangsu have the lowest indices, starting around 60 in January and rising to around 85 in May.

Month	全国	山东	河南	新疆	湖北	江苏
1月	80	90	100	100	80	60
2月	95	100	105	105	85	65
3月	110	110	110	110	90	70
4月	95	100	100	100	85	75
5月	105	105	105	105	90	85
